

Would you take 5 minutes to set up security on your child's computer, to ensure that they couldn't visit a XXX site or get involved in a chat room with some sexual deviate that is pretending to be a child themselves? Of course you would.

Up until now, there has been no way you could prevent it. Millions of kids in schools collaborate and find ways around the programs that teachers and IT departments put in place to prevent this type of thing from happening. There are sites called translation sites such as www.babelfish.altavista.com that allow kids to get to these sites by translating English to another language and get to nasty sites.

You child can now type into the search bar of Internet Explorer a nasty word and get to one of these sites. No www. Prefix is even required anymore.

At 911 PcHelp Inc. we have been striving to produce products that prevent this type of access. With the help of the general public our list of blocked sites will eventually be overwhelming. At the moment we have a tremendous list and it is growing every day.

Along with this new program addition to the Fixit Pro Program helps the user maintain their system and keep it clean of viruses. If you have an active virus you need only run the Fixit part of the program to stop it in its tracks. Running Fixit and Cleanit will keep you up and running.

Security is available from our menu by clicking on the start button then utilities, then settings and then IPcontrol. You can add choose to add, to your compilation or send us an e-mail so we can add it to the master file and you can download the result in a day. Once you make your decision which way to go you need to stay with that decision or if you update from our site you risk the chance of overwriting your additions.

Once you set the security on the computer you need only remove the C:\Fixer directory from your computer so that no one can change the settings. If you have downloaded the program make sure that you copy the program to a CD before you erase it from the computer so you can, at some

point go back and install it to make changes to the settings or run the Fixit and Cleanit Programs.

Thank you for supporting our efforts by purchasing our products. You will automatically receive a login and password that allows 12 months of included updates with your purchase, once you have registered.

Something new is on the way ! Can't say at this time but it will be exciting.
